## Abstracts

According to our (Global Info Research) latest study, the global Coil Wound Devices market size was valued at USD 17450 million in 2023 and is forecast to a readjusted size of USD 21130 million by 2030 with a CAGR of 2.8% during review period.

Increasing per capita consumption in emerging countries has led to an increasing demand for efficient coil wound devices for various industries such as automotive, food and beverages, pharmaceuticals, and agriculture, among others. This, in turn, has increased the shipment of electronic devices, and appliances which in turn has been a driving factor for the global coil wound devices market. Moreover, increasing adoption of coil wound devices in the automotive sector is anticipated to fuel the demand in near future.

Advancement and replacement of aging power infrastructure in the U.S. is one of the key factors driving the coil wound devices demand in North America. The aging electricity infrastructure will require new technologies to enable better failure detection. Traditional systems do not meet many emerging trends, such as growing penetration of distributed generation resources and need for greater resilience. The new transmission technologies combine power electronic devices with capacitors and inductors to provide a range of controlling capabilities for transmission and distribution systems. The demand for coil wound devices, especially transformers, is anticipated to witness a notable growth as they are important components that are used for carrying out electric grid transition from traditional designs to the designs of future in the coming years.
