Abstracts

The global Coiled Tubing Services market size is expected to reach \$ 9751 million by 2032, rising at a market growth of 7.3% CAGR during the forecast period (2026-2032).

Coiled tubing refers to a continuous length of small-diameter steel pipe and related surface equipment as well as associated drilling, completion and workover, or remediation, techniques. Coiled tubing oilfield technology was initially developed for working on live, producing wells.

Coiled tubing technology is frequently used to deploy tools and materials through production tubing or casing while remedial work is performed on producing wells. Coiled tubing fulfills three key requirements for downhole operations on live wells by providing a dynamic seal between the formation pressure and the surface, a continuous conduit for fluid conveyance and a method for running this conduit in and out of a pressurized well.

Coiled tubing strength and rigidity, combined with its capability to circulate treatment fluids, offer distinct advantages in workover operations. In addition to drilling and completion operations, oil and gas companies are using coiled tubing to help fish for lost equipment and for conveying well logging tools.

Global Coiled Tubing Services key players include Schlumberger, Halliburton, Baker Hughes (GE), etc. Global top three manufacturers hold a share about 60%.

North America is the largest market, with a share about 50%, followed by South America, and Europe, both have a share over 20 percent.

In terms of product, Well Intervention is the largest segment, with a share over 65%. And in terms of application, the largest application is Onshore, followed by Offshore.
