## Abstracts

According to our (Global Info Research) latest study, the global Coke Dry Quenching Heat Recovery Steam Generator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Coke Dry Quenching Heat Recovery Steam Generator (CDQ-HRSG) is a key component of coke dry quenching systems used in the iron and steel industry. It is designed to recover and utilize the waste heat generated during the coke dry quenching process. The CDQ system takes hot coke produced in the coke oven and quenches it using inert gas, resulting in the release of high-temperature waste gas. The CDQ-HRSG captures this waste heat and converts it into steam, which can be used for various industrial processes or electricity generation. This technology not only improves energy efficiency and reduces environmental impact but also provides a valuable resource for power generation and heat integration in steel and other energy-intensive industries.

The market prospect for Coke Dry Quenching Heat Recovery Steam Generators (CDQ-HRSG) is promising due to several factors. The iron and steel industry is a significant consumer of energy and seeks ways to improve energy efficiency and reduce emissions. CDQ technology offers an effective solution by recovering waste heat from the coke dry quenching process and converting it into useful steam. This not only reduces energy consumption but also provides a valuable resource for power generation and other industrial processes. With increasing global demand for steel and growing environmental concerns, the market for CDQ-HRSG is expected to see robust growth, offering opportunities for companies involved in the design, manufacturing, and installation of these systems.
