The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Cold atom sensor is a kind of sensor. It uses cold atoms to measure various physical quantities, such as acceleration, rotation and magnetic field. Cold atoms are usually produced by lasers, which cool the atoms to a temperature close to absolute zero, thus forming a state of matter called Bose-Einstein condensate. These cold atoms can be captured and manipulated by magnetic field and electric field, so they can be used as sensitive detectors for a series of applications. The cold atom sensor has the potential to provide extremely high precision measurement, making it a valuable tool for a series of scientific and technological applications.
