Abstracts

Cold Chain Temperature Indicators are devices designed to monitor and indicate whether a product has been exposed to temperatures outside of a specified range during storage or transportation within the cold chain. These indicators typically consist of labels, tags, or electronic sensors that change color, display a message, or provide a digital readout when exposed to temperatures above or below the acceptable threshold. By providing visual or electronic evidence of temperature excursions, cold chain temperature indicators help ensure the integrity and safety of temperature-sensitive products such as vaccines, pharmaceuticals, food items, and biologics throughout the supply chain, thereby minimizing the risk of spoilage, degradation, or loss of efficacy due to temperature fluctuations.

According to our (Global Info Research) latest study, the global Cold Chain Temperature Indicators market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
