## Abstracts

According to our (Global Info Research) latest study, the global Cold Drawn Welded Tube market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Cold Drawn Welded Tube is made by cold drawing process using ERW tube as raw material. After welding, the whole tube body is normalized to ensure the homogeneity of weld and heat affected zone with the rest of the tube in metallographic structure and mechanical properties; cold drawing and subsequent heat treatment (eliminating internal stress) give the steel tube good dimensional and mechanical properties. Cold Drawn Welded Tube is widely used in automotive applications and other special machinery.
