Cold heading (or cold forming) is a method of forming metal in progressive steps into net shaped or near net shaped parts. Starting with a slug, which is cut from a continuous coil of wire material; the cold heading machine uses a series of powerful hammers and dies to form a part.

The cold heading machine belongs to the wire forming automatic machine category in the stamping machinery. It is a high-efficiency and automatic forging machine. It mainly pumps the wire to the machine and turns it into a screw by the function of the machine. The production of standard multi-station screws such as bolts, pins, rollers, as well as cold-formed parts with complex shapes and auto parts such as bevel gear shafts, ball pins, spark plugs, etc., to achieve multi-station technology with less and no cutting machine.
