According to our (Global Info Research) latest study, the global Cold In-place Recycling (CIR) Machine market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A Cold In-place Recycling (CIR) Machine is a specialized construction equipment used in pavement rehabilitation and maintenance. It employs a cold process to recycle and rejuvenate existing asphalt pavement materials without the need for extensive heat. The CIR machine typically operates by milling the top layer of the old asphalt, mixing it with recycling agents or additives, and then placing the recycled mixture back onto the road surface.
