The cold plate liquid-cooled IT container is a high-density integrated data center solution that integrates servers, cooling systems, power systems, and management and control modules. It uses cold plate liquid cooling technology to conduct the coolant directly to the surface of the heat source, and quickly removes the heat through heat exchange. It has the characteristics of high energy efficiency, space saving, flexible deployment, and low noise. It is particularly suitable for scenarios with extremely high requirements for energy consumption and heat dissipation, such as AI training, scientific research simulation, edge computing, etc. The system can be deployed in a modular manner to meet the needs of rapid expansion and remote centralized management.
