## Abstracts

According to our (Global Info Research) latest study, the global Cold Retreaded Automotive Tires market size was valued at US\$ 167 million in 2025 and is forecast to a readjusted size of US\$ 194 million by 2032 with a CAGR of 2.0% during review period.

Cold Retreaded Automotive Tires involves first wrapping a vulcanized, patterned tread strip onto an old tire carcass that has been inspected, ground, and repaired. Then, using a cushioning compound, a sealing sleeve, and a vulcanizing tank/chamber, low-temperature pressure bonding is applied to re-bond the pre-made tread to the tire carcass, creating a reusable tire. Cold retreading does not require complete molds for every size and tread pattern, resulting in lower equipment investment, flexible tread pattern selection, strong adaptability to production batches, and less thermal damage to the tire carcass. It is suitable for high-frequency replacement scenarios such as commercial vehicle fleets, truck and bus tires, trailer tires, and public transportation and logistics vehicles. The upstream of the industry chain includes retreadable tire carcasses, tread rubber, cushioning compound, sealing sleeves, adhesives, natural rubber, synthetic rubber, carbon black, steel wire, additives, testing equipment, grinding equipment, and vulcanizing tanks. The downstream targets fleet operators, logistics companies, and public transportation groups. Gross profit margins are approximately 30%–50%.
