Abstracts

According to our (Global Info Research) latest study, the global Cold Roll Laminator market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cold roll laminators use a plastic film which is coated with an adhesive and glossy backing which does not adhere to the glue. When the glossy backing is removed, the adhesive is exposed, which then sticks directly onto the item which needs to be laminated. This method, apart from having the obvious benefit of not requiring expensive equipment, is also suitable for those items which would be damaged by heat. Cold laminators range from simple two roller, hand crank machines up to large and complex motor driven machines with high precision rollers, adjustable roller pressure and other advanced features.

Cold lamination increased in popularity with the rise of wide format inkjet printers, which often used inks and papers incompatible with hot lamination. A large percentage of cold laminate for use in the print industry is PVC, although a wide range of other materials are available. Cold laminating processes are also used outside of the print industry, for example coating sheet glass or stainless steel with protective films.

The Global Info Research report includes an overview of the development of the Cold Roll Laminator industry chain, the market status of Printing Shop (Manual Cold Roll Laminator, Automatic Cold Roll Laminator), Printing Factory (Manual Cold Roll Laminator, Automatic Cold Roll Laminator), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Cold Roll Laminator.
