According to our (Global Info Research) latest study, the global Cold Rolled Silicon Steel market size was valued at USD 131080 million in 2023 and is forecast to a readjusted size of USD 158760 million by 2030 with a CAGR of 2.8% during review period.

Cold rolling is used to further treat hot rolled steel sheet to increase its strength and its strength-to-weight ratio and enable it to hold tighter tolerances during fabricating and machining. In addition, cold rolling is used to smooth and finish the surface of hot rolled steel. The processes used to improve the surface finish and to size the cold rolled sheet more precisely include chemical or mechanical descaling and cold rolling or polishing. It also increases its strength and hardness because it is performed at room temperature and below the recrystallization temperature.
