Abstracts

Cold Rolling Coil is a product obtained by rolling hot-rolled coils at room temperature below the recrystallization temperature. Mostly used for architectural decoration, electrical products, etc. Cold rolling is rolling at the recrystallization temperature, but is generally understood as rolling using a material rolled at room temperature. Since there is no heating in the production process, there are no defects such as pitting and iron oxide scale that often occur in hot rolling, and the surface quality is good and the finish is high.

This report studies the global Cold Rolling Coil production, demand, key manufacturers, and key regions.
