The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Cold spray coating is a surface engineering process that involves the deposition of metallic, ceramic, or composite coatings on a substrate without the use of heat. The process uses a high-pressure cold spraying gas stream to accelerate powder particles at supersonic speeds, causing them to impact the substrate surface and bond with it. This process can be used to apply a wide range of coatings, including metal alloys, ceramics, polymers, and composites. Leading manufacturers in the global market are focused on improving their

manufacturing processes to enhance efficiency, reduce costs, and improve product quality.
