A cold trap chiller is a specialized device that uses cooling methods to prevent vapors from contaminating vacuum pumps. The cold trap chiller works by condensing or sublimating gases like solvents and water vapors, rendering them harmless. These devices utilize active materials like dry ice, liquid nitrogen, or a Peltier element for cooling. They are most frequently used to condense gases, but they are also effective at trapping other types of contamination like solids. Cold trap chillers are ideal for cryogenic applications and are designed to withstand rapid temperature changes. They are an essential tool in any laboratory setting that uses vacuum pumps.
