The global Colitis Inducers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A colitis-inducing agent is a chemical or biological substance used to induce the development of colitis in laboratory animals, usually mice or rats. These inducers can induce colitis through different mechanisms, such as damaging the intestinal mucosal barrier, activating the immune system, or causing intestinal flora imbalance. These models are commonly used to study the pathogenesis, pharmacological treatment, and preventive strategies of colitis. Common colitis-inducing agents include diacetyl dimercaptoaniline (DSS), trinitrobenzene sulfonic acid (TNBS), etc.

This report studies the global Colitis Inducers production, demand, key manufacturers, and key regions.
