The global Colitis Mouse Models market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Colitis mouse models are experimental models used in research to study colitis, a type of inflammatory bowel disease. These models involve inducing colitis in mice through various methods, such as chemical induction, genetic manipulation, or transfer of immune cells. Researchers use these models to study the underlying mechanisms of colitis, test potential therapies, and understand the disease's progression. The use of mouse models allows scientists to investigate colitis in a controlled environment and provides insights that can be applied to human colitis.
