Abstracts

Collaborative robot (Cobots) is a robot intended to physically interact with humans in a shared workspace. In addition, a collaborative robot is less bulky and much easier to operate than other equipment when loads between 50 and 100 kilos must be handled. This is in contrast with other robots, designed to operate autonomously or with limited guidance, which is what most industrial robots were up until the decade of the 2010s. Cobots can have many roles ? from autonomous robots capable of working together with humans in an office environment that can ask you for help, to industrial robots having their protective guards removed as they can react to a human presence under EN ISO 10218 or RSA BSR/T15.1.
