## **Abstracts**

Collision mitigation system (CMS) is specially designed for automobiles to prevent and mitigate rear-end crashes. System used accurate data analysis algorithms which combine the input from radar and image sensors to offer enhanced safety. The system consists of camera, vision control module and electronically scanning radar, and mounted on bonnet of an automobile. Collision mitigation system has specially designed to warn driver with audible and visual alarm, if system estimates high risk of collision when equipped vehicle approaches an obstacles such as pedestrian and another vehicle among others. If drivers fails to react over the warning, the system automatically applies the brake to ensure safety.
