According to our (Global Info Research) latest study, the global Collision Mitigation System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Collision mitigation system (CMS) is specially designed for automobiles to prevent and mitigate rear-end crashes. System used accurate data analysis algorithms which combine the input from radar and image sensors to offer enhanced safety. The system consists of camera, vision control module and electronically scanning radar, and mounted on bonnet of an automobile. Collision mitigation system has specially designed to warn driver with audible and visual alarm, if system estimates high risk of collision when equipped vehicle approaches an obstacles such as pedestrian and another vehicle among others. If drivers fails to react over the warning, the system automatically applies the brake to ensure safety.

Transportation is an indispensable need of a community and transportation industry is expected to grow linear with growth in population. Health conscious consumers and emerging government regulations over road safety are driving demand for safe and technologically sound vehicles. It would be a key driver to promote adoption of collision mitigation systems. Automobile manufacturer are continuously adopting latest technology in order to cater the growing demand of smarter, faster, comfortable and safe vehicles, which would augment the demand of collision mitigation system. Additionally, growing traffic congestion in China and India is expected to drive adoption of collision mitigation system at steady rate. However sustainability of the global collision mitigation system market is majorly depends on further innovation and product development.
