Colloidal mixer, also known as a colloid mill or high-shear mixer, is a specialized type of machinery used in the processing industry to achieve high levels of dispersion, emulsification, and homogenization of liquid-solid or liquid-liquid mixtures. It operates by forcing the materials through a narrow gap between a rotating and a stationary element, typically a rotor and stator configuration. This process subjects the materials to intense shear forces, turbulence, and cavitation, resulting in the breakdown of particles, agglomerates, or droplets into much smaller sizes, creating a uniform colloidal suspension.
