Abstracts

The global Colloidal Silica market size is expected to reach \$ 1695.8 million by 2029, rising at a market growth of 2.4% CAGR during the forecast period (2023-2029).

The key global manufacturers of colloidal silica are Fuso Chemical, Nouryon, Grace, Nissan Chemical, Guangdong Well-Silicasol, Nalco, Merck, Evonik, Yinfeng Silicon, etc. The top three manufacturers together account for more than 30% of the market share, with the largest manufacturer being Guangdong Well-Silicasol, with 20% of the market share. The global origins are mainly located in China, North America, Europe, Japan, India, etc., with China being the largest production region, holding over 60% of the market share. In terms of product categories, alkaline silicones have the largest market share, accounting for 75%, followed by modified silicones and acidic silicones, accounting for 15% and 7%, respectively. In terms of applications, polishing is the number one application, with a 30% market share. In addition, investment casting, paints and coatings are also major applications.

Colloidal silica is silica particles that are suspended in a liquid. The liquid is denser than water and has been stabilized electrostatically to allow the particles to stay suspended in the solution. The silica particles are also very small and do not have a large density. If the particles are too large, they will settle out of the solution. If the silica particles are too small, they are difficult to stabilize in a solution. Colloidal silica is not only available in bulk deliveries, but also in plastic drums and IBCs. In the report, QYR cover colloidal silica data by actual data instead of concentration conversion. The purity of most manufacturer products had more than 20%. Since the low-end market is very confusing, it may not be appropriate to convert by 30% solution or 100% active ingredient.

This report studies the global Colloidal Silica production, demand, key manufacturers,
