According to our (Global Info Research) latest study, the global Colonic Stents market size was valued at USD 20 million in 2023 and is forecast to a readjusted size of USD 26 million by 2030 with a CAGR of 3.7% during review period.

colonic stent is a hollow tube, which is made up of a flexible metal or an alloy. It helps to keep the lumen (segment) of the large bowel open, when it becomes blocked by a stricture or a tumor. A stent is the size of a pen when it is inserted, and it is designed to gently expand once it is released inside the colon. By this way, colonic stent will make a channel through the blockage and allow the bowel to function more easily and thus reduce pain. However, stents can be used when there is either a partial or a complete blockage in the bowel to reduce the pressure in the bowel and relieve the obstruction. Further, stents are also used when surgery is not recommended as an alternative to keep the bowel working. It is performed by specialist doctors including endoscopist or by an interventional radiologist in the X-ray department.
