Abstracts

According to our (Global Info Research) latest study, the global Colopavine Hydrochloride market size was valued at US$ 196 million in 2025 and is forecast to a readjusted size of US$ 469 million by 2032 with a CAGR of 9.8% during review period.

In 2025, global Coblopasvir Hydrochloride production reached approximately 520,000 units.Coblopasvir Hydrochloride is a Class 1.1 innovative small-molecule anti-hepatitis C virus (HCV) drug independently developed in China. It belongs to the category of direct-acting antivirals (DAA) and represents a new-generation oral NS5A inhibitor. Originally researched and developed by domestic pharmaceutical enterprises with full independent intellectual property rights, it fills the gap of high-cure-rate domestic drugs for hepatitis C treatment. Included in the national medical insurance catalogue, it serves as a core drug for the standardized treatment of chronic hepatitis C.

Coblopasvir Hydrochloride is an NS5A inhibitor targeting hepatitis C virus (HCV), typically used in combination with other direct-acting antivirals (DAAs), and demonstrates a certain level of competitiveness in China?s antiviral treatment market. With the strengthening of HCV screening efforts and the advancement of the public health goal of ?eliminating hepatitis C,? diagnosis and treatment rates continue to improve, providing a stable clinical demand for this drug. From a market landscape perspective, DAA combination regimens centered on Sofosbuvir, along with imported originator drugs, still dominate the market. However, coblopasvir hydrochloride, leveraging its domestic R&D advantages, price competitiveness, and flexibility in combination regimens, is well positioned to gain market share in primary healthcare settings and among price-sensitive patient populations. On the policy side, national reimbursement negotiations and volume-based procurement continue to put downward

pressure on drug prices, while significantly improving patient accessibility and accelerating market uptake. From a competitive standpoint, the emergence of various NS5A inhibitors and pan-genotypic DAA regimens from both domestic and international players is intensifying market competition. Therefore, the future market performance of coblopasvir hydrochloride will depend on its clinical positioning within combination therapies, the accumulation of real-world efficacy and safety data, as well as its overall competitiveness in pricing, distribution channels, and insurance coverage.
