Abstracts

The global Color Indicator Ion Exchange Resin market size is expected to reach \$ 121 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

Color Indicator Ion Exchange Resin is a functional polymeric material in which specialized pH or ion indicators are embedded. When the resin undergoes ion exchange reactions, thereby altering the pH value or ionic composition of its surrounding environment, the embedded indicators exhibit a distinct color change.

The upstream sector primarily comprises styrene, divinylbenzene, acrylic monomers, sulfonating agents, amination agents, pH indicator dyes, regeneration acids and bases, and packaging materials. Midstream enterprises utilize processes such as polymerization, cross-linking, functionalization, conversion, and blending to produce color-changing mixed-bed resins that are ready for direct packing into filter cartridges or exchange columns. The downstream sector is predominantly applied in scenarios requiring low flow rates, high-purity water, and an intuitive visual indication of resin exhaustion.

In 2025, the global sales volume is projected to reach approximately 8,000 tons, with a global average ex-factory price ranging from \$9 to \$12 per kilogram; leading manufacturers are expected to maintain gross margins of approximately 30% to 40%.
