## Abstracts

A colorimetric microplate reader is a specialized instrument used for measuring the optical properties of liquid samples contained in microplates. It is commonly employed in biological and chemical research laboratories, where it is used to read and quantify the results of various assays and experiments, such as protein concentrations or DNA analysis. This instrument utilizes a wavelength-specific detection system to measure the color changes caused by various substances in the microplate, converting them into numerical values that can be used for further analysis and interpretation.

According to our (Global Info Research) latest study, the global Colorimetric Microplate Reader market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The industry trend for colorimetric microplate readers is towards greater automation, integration, and miniaturization. As research laboratories become increasingly reliant on high-throughput screening and automation technology, colorimetric microplate readers are being developed with more advanced features, such as robotic autoloading systems, multi-channel capabilities, and real-time data streaming, to streamline sample processing and analysis. Additionally, there is a growing emphasis on portability and user-friendliness, allowing researchers to take their microplate reader with them wherever they go and perform their experiments more conveniently. At the same time, the use of digital technologies such as cloud-based data storage and analysis is becoming increasingly common, providing researchers with more flexibility and accessibility to their data.
