Abstracts

The global COM-HPC Client Module market size is expected to reach \$ 1546 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032).

The COM-HPC Client module is a high-performance computer module for client and embedded edge applications. Based on the open standard design of COM-HPC, it uses the module loading board architecture to integrate CPU, memory and core I/O interfaces into standardized modules, and implements system expansion through high-speed connectors and carrier boards. It is mainly oriented to the application scenarios where power consumption and size are limited but high computing performance is required. It is widely used in industrial automation equipment, edge computing terminals, medical equipment, human-computer interface systems and intelligent transportation terminals. In 2025, the global sales volume will be about 430000, the average unit price will be about \$2180 each, the capacity utilization rate will be about 84%, and the gross margin will be about 28%. Its upstream mainly includes processors and SoC chip manufacturers, memory and Storage enterprise, high-speed connector and PCB Manufacturers and suppliers of power and cooling components. The midstream is an embedded module design enterprise and an industrial computer manufacturer. The downstream is mainly concentrated in industrial automation equipment manufacturers, edge computing equipment manufacturers, medical equipment companies, transportation equipment enterprises and system integrators. In the product cost structure, processors and core chips account for about 50%, memory and storage account for about 17%, high-speed PCBs and connectors account for about 12%, power and cooling systems account for about 9%, R&D design and software adaptation account for about 7%, and testing and other costs account for about 5%. In terms of demand, the downstream demand list includes industrial control terminals, human-computer interface devices, and edge AI The list of downstream

customers includes industrial automation manufacturers, embedded equipment manufacturers, medical equipment enterprises, transportation system integrators and edge computing solution providers. The business opportunities are driven by the continuous promotion of the digital economy and industrial Internet construction. The technological innovation is driven by the improvement of low-power high-performance processors, PCIe high-speed interfaces and AI edge computing capabilities. The change in consumption demands is reflected in the increased demand for smaller size, lower power consumption and higher computing power density, thus promoting the development of the COM-HPC Client module in the direction of high integration and low-power high-performance.
