Abstracts

A Combi Boiler is a compact and efficient unit that provides all the heat and hot water a small home needs while saving on operating and installation costs.

According to our (Global Info Research) latest study, the global Combi Boiler market size was valued at USD 1905.4 million in 2022 and is forecast to a readjusted size of USD 2353.4 million by 2029 with a CAGR of 3.1% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Unlike conventional systems, combi boilers do not store domestic hot water. They heat water from the cold mains directly even as you use them. With combi boilers, you do not have a hot water cylinder, loft tank, or pipework. Combis are like standard unvented boilers but they have a second heating circuit, which is what gives you the instant hot water whenever you need it. If fed directly from the main water supply to the heat exchanger, the combi boiler can have an unlimited hot water supply as long as the boiler is firing. Combis manage to extract a larger amount of heat from the flue gases that escape from the flue system, which increases the combi's efficiency.

The global Combi Boiler market was 2000 million US\$ in 2018 and is expected to 2000 million US\$ by the end of 2025, growing at a CAGR of xx% between 2019 and 2025.
