According to our (Global Info Research) latest study, the global Combination Road Roller market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The combination roller, is a commonly used heavy machinery in road construction and maintenance projects. Its distinguishing feature lies in its simultaneous possession of different compaction functions, typically integrating both static and vibratory compaction capabilities. Specifically, a combination roller usually features a steel front wheel (or vibration wheel) designed for vibratory compaction, along with a rubber-tired rear wheel that serves for static rolling compaction. This design allows for the concurrent delivery of both vibratory and static compaction effects.
