According to our (Global Info Research) latest study, the global Combined Gasket market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The composite gasket is a gasket that combines multiple sealing elements to provide a higher level of sealing. It is usually composed of multiple O-rings and other sealing elements, and used in specific joints.

The combined sealing gasket can enhance the sealing performance. By superimposing and combining multiple sealing elements, a more reliable sealing effect can be achieved and the risk of leakage can be reduced. The selection of combined sealing gaskets should be carried out according to specific working conditions and needs. When selecting, factors such as the nature of the liquid or gas, pressure, temperature, speed, and gasket material compatibility need to be considered.
