## Abstracts

The institutional segment in the U.S. combined heat and power system for data center market is expected to gain 10 BPS during the assessment period. Colleges/universities are estimated to account for a major revenue share in the institutional segment in the U.S combined heat and power system for data center market.

### SCOPE OF THE REPORT:

This report focuses on the Combined Heat and Power (CHP) System for Data Center in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Considerable economic recovery and relatively lower natural gas prices is another factor which is creating a robust development in the U.S combined heat and power system for data center market. The continuous fall in the prices of natural gas has propelled the end users in the institutional segment towards the use of combined heat and power systems as natural gas. Expanded tax incentives for combined heat and power are driving the growth of the U.S. combined heat and power system for data center market. Combined heat and power systems that are up to 50 MW in capacity and that exceed 60% energy efficiency are eligible for incentives, subject to certain limitations and reductions for large systems. This tax incentive policy is attracting various institutional organizations across the U.S to adopt combined heat and power systems.

The worldwide market for Combined Heat and Power (CHP) System for Data Center is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx
