Abstracts

The global Combined Transformer market size is expected to reach \$ 55156 million by 2032, rising at a market growth of 10.4% CAGR during the forecast period (2026-2032).

A combination transformer is a complete set of power distribution equipment that integrates transformers, high-voltage switchgear, low-voltage distribution devices, and protection control systems into the same box. It is usually shipped in a pre installed or modular form and can be put into operation on site with simple wiring. This device has the characteristics of compact structure, small footprint, short installation cycle, and high safety. It is widely used in urban distribution networks, industrial parks, new energy generation (wind power, photovoltaic), and charging infrastructure, and is an important component of modern distribution systems. In 2025, global Combined Transformer production reached approximately 386,583 Units, with an average global market price of around K US\$ 68.42 per unit.

The overall market for modular transformers has maintained steady growth, mainly driven by power grid upgrades, increased demand for new energy grid integration, and urbanization processes. With the rapid development of distributed energy sources such as wind power and photovoltaics, the demand for flexible deployment and rapid construction of distribution equipment has significantly increased, driving the continuous growth of demand for transformer products. From the perspective of technological trends, products are evolving towards intelligence and integration, gradually integrating remote monitoring, digital operation and maintenance, and fault diagnosis functions to improve operational efficiency and reliability. From the perspective of competitive landscape, the market is dominated by power equipment manufacturers and system integrators, and enterprises with complete design capabilities and project experience have more advantages. In the context of the construction of new power systems and the

promotion of distribution network automation in the future, modular transformers still have significant growth potential in fields such as new energy, electric vehicle charging, and smart cities.
