## Abstracts

According to our (Global Info Research) latest study, the global Commercial Acousto-Optic Tunable Filters (AOTFs) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An Acousto-Optic Tunable Filter (AOTF) is a solid-state, electro-optical device that functions as an electronically tunable excitation filter to simultaneously modulate the intensity and wavelength of multiple laser lines from one or more sources. Devices of this type rely on a specialized birefringent crystal whose optical properties vary upon interaction with an acoustic wave. Changes in the acoustic frequency alter the diffraction properties of the crystal, enabling very rapid wavelength tuning, limited only by the acoustic transit time across the crystal.
