## Abstracts

According to our (Global Info Research) latest study, the global Commercial Aero Turbofan Engine market size was valued at USD 20440 million in 2023 and is forecast to a readjusted size of USD 30020 million by 2030 with a CAGR of 5.6% during review period.

The turbofan or fanjet is a type of airbreathing jet engine that is widely used in aircraft propulsion. The word 'turbofan' is a portmanteau of 'turbine' and 'fan': the turbo portion refers to a gas turbine engine which achieves mechanical energy from combustion,[1] and the fan, a ducted fan that uses the mechanical energy from the gas turbine to accelerate air rearwards. Thus, whereas all the air taken in by a turbojet passes through the turbine (through the combustion chamber), in a turbofan some of that air bypasses the turbine.

North America market is estimated to see the CAGR from 2017 to 2025.
