According to our (Global Info Research) latest study, the global Commercial Aircraft Turboprop Engine(ATP) market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A commercial aircraft turboprop is a power plant that combines a turbine engine and a propeller. By burning fuel, high-temperature and high-pressure gas is generated, which drives the turbine to rotate and provides thrust through an axial flow fan or compressor. Connected to the propeller through a transmission system, the power of the engine is transmitted to the propeller, causing it to rotate and generate thrust.

The main advantages of commercial aircraft turboprop engines are: high fuel efficiency, short take-off and landing distances, low cruising altitudes, and wide application.
