Abstracts

According to our (Global Info Research) latest study, the global Commercial Building Polished Concrete market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

One of the main reasons for the increase in demand for polished concrete is the strong demand for hotel floors and other commercial structure buildings. This is mainly due to several benefits of polished concrete, including good visual appeal of the floor as well as resistance to sliding and wear with high human traffic. Demand is expected to grow significantly in the Asia-Pacific region, as well as in the Middle East and Africa. Demand for polished concrete is likely to increase due to heavy investment in housing development and rapid industrialization in these developing countries. The increased aesthetic appeal of a building or facility is expected to drive the demand for market size in polished concrete.

The cost of raw materials and energy used to manufacture polished concrete is volatile and this trend is expected to continue over the forecast period. The cost of raw materials may increase due to fluctuations in the price of crude oil and petroleum products, thereby increasing the cost of cement, sealants and adhesives used in polished concrete. Thus, the cost of these components has a direct impact on the cost of polishing concrete. Suppliers have increased the price of their product margins in response to rising raw material costs, limiting the market share growth potential of polished concrete.'
