According to our (Global Info Research) latest study, the global Commercial Carbon Capture market size was valued at US\$ 1593 million in 2025 and is forecast to a readjusted size of US\$ 3094 million by 2032 with a CAGR of 10.1% during review period.

The world is facing an unprecedented climate crisis, and carbon emissions are a major contributor to it. To mitigate the impact of climate change, it is essential to reduce the amount of carbon emissions from various sources. Carbon capture technologies offer remarkable solutions to this problem.

Carbon Dioxide, CO₂, is commonly found in natural gas. In order to meet pipeline specifications or other application specific requirements, CO₂ separation is necessary. In addition, there may also be H₂S and H₂O present that needs to be removed. CO₂ separation membranes have been widely used for CO₂ removal applications and come with the added benefit of removing H₂S and H₂O as well.
