The photoelectric duct smoke detector segment leads the market and is expected to grow at the fastest CAGR during the forecast period owing to the wide acceptance of the product in commercial applications

Duct smoke detectors are specifically designed to be installed in HVAC ducts to identify smoke circulating through the HVAC system. They are deployed in buildings to avoid panic, injury and property damage during emergencies, as well as to notify users that smoke is passing through HVAC ducts. They also issued alerts to shut down air handlers and fans to prevent smoke from circulating in the building. These detectors can also be set to shut down the building's supply fans individually without affecting the operation of the return fans. In some cases, this procedure is used because it helps to remove smoke and other impurities from the air caused by fires.
