## Abstracts

A juicing machine is a tool used to extract juice from fruits, herbs, leafy greens and other types of vegetables in a process called juicing

According to our (Global Info Research) latest study, the global Commercial Electric Juicing Machines market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Traditionally, centrifugal juicing machine is the most common type of juicer. These typically utilize a fast-spinning metal blade that spins against a mesh filter, separating juice from flesh via centrifugal force. The juice and pulp are then separated into different containers. The problem with centrifugal juicers is that the fast-spinning metal blade generates heat, which destroys some of the enzymes in the fruits and vegetables you're juicing.
