According to our (Global Info Research) latest study, the global Commercial Grade Chip Antenna market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A commercial grade chip antenna is a type of antenna designed for use in wireless communication devices, such as smartphones, tablets, laptops, and other portable electronic devices. These antennas are small in size and are mounted directly on the device's printed circuit board (PCB), eliminating the need for external antennas and reducing the overall size of the device.

Commercial grade chip antennas are typically made from ceramic or printed circuit board (PCB) material and can operate at frequencies ranging from a few hundred megahertz to several gigahertz. They are designed to be easy to integrate into a device's PCB and can be placed in a variety of orientations to optimize performance.
