According to our (Global Info Research) latest study, the global Commercial LED Display Rental market size was valued at US\$ 1554 million in 2025 and is forecast to a readjusted size of US\$ 2330 million by 2032 with a CAGR of 6.0% during review period.

Commercial LED display rental refers to a service model where businesses or event organizers rent LED displays and their supporting systems on a short-term or project-based basis for commercial displays, advertising, or on-site events. This business is typically provided by professional rental service providers, covering various forms such as indoor and outdoor LED large screens, splicing screens, transparent screens, and creative irregular-shaped screens. They offer integrated solutions tailored to customer needs, including content playback, on-site operation and maintenance, and installation/removal services. Compared to direct equipment purchase, the rental model offers advantages such as cost flexibility, rapid updates and iterations, and adaptability to multiple scenarios. It is widely used in exhibitions, concerts, sporting events, commercial activities, corporate launches, and advertising media, representing an important form of integration between the display industry and the service economy.

With the recovery of the offline economy, the rebound of exhibition activities, and the increasing demand for immersive experiences, the commercial LED display rental market is experiencing sustained growth. Brand marketing is upgrading from traditional static advertising to dynamic visual experiences. The widespread adoption of high-resolution, small-pitch LED technology and new technologies such as naked-eye 3D and XR virtual production makes rental display solutions increasingly important in stage performances, live streaming, e-commerce activities, and digital marketing. Meanwhile, compared to the high costs of equipment procurement, more and more companies are

opting for leasing models to improve capital efficiency and quickly acquire the latest technological equipment. In the future, with the development of the digital content industry, metaverse scenarios, and immersive entertainment, LED leasing will upgrade from 'equipment provision' to 'integrated solutions of content + technology + services,' promising a broad market prospect.
