Abstracts

The global Commercial Plastic Lumber market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

This report studies the commercial plastic lumber market, plastic lumber is a plastic form of lumber (timber) made of virgin or recycled plastic. It is made of 100% plastic, compared with wood-plastic composite lumber. Widely employed in outdoor decking, it is also used for molding, trim, and garden furniture such as park benches. Resistant to cracking and splitting when appropriately installed, plastic lumber can be molded with or without simulated wood grain details. Even with a wood grain design, plastic lumber is still easy to distinguish visually from natural timber – the grains are the same uniform color as the rest of the material.

This report studies the global Commercial Plastic Lumber production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Commercial Plastic Lumber, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
