Abstracts

Low-end business routers start right about where consumer models top out. While they share some of the same features like a built-in switch, WiFi support, and different ISP compatibility, they offer features beyond this to suit the priorities of a business environment.

Business routers, do however, lack some of the features available in high-end consumer routers. You won't find a convenient-but-insecure WPS button, for example, nor will you get USB ports for sharing a printer or storage. And it's no surprise that you won't find an on-board media server. These features aren't relevant for a business environment.

According to our (Global Info Research) latest study, the global Commercial Router market size was valued at USD 5465.7 million in 2022 and is forecast to a readjusted size of USD 7532.9 million by 2029 with a CAGR of 4.7% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

RobustVPN: Business-class router provides virtual private network that can handle many more users (anywhere from 5 to 100), while offering much stronger security than consumer models do. At its best, a VPN will provide an environment in which a remote user's experience is no different than if they were working in the office and hardwired to the network.
