According to our (Global Info Research) latest study, the global Commercial Telepresence Robots market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A telepresence robot is a device that transports a person virtually to another location. It makes a person's presence felt even though the person might not be physically present. Being equipped with displays, speakers, microphones, cameras, and various other features (depending on the multiple robots in the market), telepresence robots are a revolutionary concept in the field of virtual interaction. They are a sense of extension of the user's presence. In this report, commercial telepresence robots refer to their application in the commercial field, such as for office matters.

A telepresence robot's significant advantage is that it provides accessibility with the feeling of being physically present. Anyone can join a meeting virtually (e.g., Zoom, Microsoft Teams, etc.) but joining that meeting virtually through a human-like body makes the user feel physically present. Users can control the robot's movement and interact with various people as they go around a place (e.g., an office) like they would if they were physically in that place.
