Abstracts

The global Commercial Telepresence Robots market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029). A telepresence robot is a device that transports a person virtually to another location. It makes a person's presence felt even though the person might not be physically present. Being equipped with displays, speakers, microphones, cameras, and various other features (depending on the multiple robots in the market), telepresence robots are a revolutionary concept in the field of virtual interaction. They are a sense of extension of the user's presence. In this report, commercial telepresence robots refer to their application in the commercial field, such as for office matters.

A telepresence robot's significant advantage is that it provides accessibility with the feeling of being physically present. Anyone can join a meeting virtually (e.g., Zoom, Microsoft Teams, etc.) but joining that meeting virtually through a human-like body makes the user feel physically present. Users can control the robot's movement and interact with various people as they go around a place (e.g., an office) like they would if they were physically in that place.

This report studies the global Commercial Telepresence Robots production, demand, key manufacturers, and key regions.
