The global Commercial Traffic Headset market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Traffic headsets are designed for voice transmission. They are mainly connected to telephones or computers and used in offices and call centers. Their characteristics are: narrow band width, designed for the frequency of voice. The working bandwidth of the telephone headset is 300-3000Hz, where more than 93% of the voice energy is concentrated. Therefore, the fidelity of the voice is good, while other frequency bands are strongly suppressed; The microphone adopts professional electret microphone, which works stably; Light weight, high durability. Because users need to use headsets for a long time, traffic headsets take comfort and high performance into consideration.
