Abstracts

The global Commercial Vehicle Closed-Road Autonomous Driving market size is expected to reach \$ 7367 million by 2032, rising at a market growth of 37.6% CAGR during the forecast period (2026-2032).

Commercial vehicle closed-road autonomous driving refers to integrated autonomy solutions enabling commercial vehicles to operate within controlled, geofenced environments (mines, ports/terminals, yards, airports, construction sites) under a constrained ODD, typically combining onboard autonomy (perception-planning-control) with fleet orchestration/remote supervision, redundant safety design, and site connectivity—often commercialized as L4-like driverless operations in limited scenarios. The supply chain typically has three layers: (i) upstream vehicle & site hardware/infrastructure (ii) midstream software & integration (iii) downstream site owners/operators (mines/ports/yards/airports) via project delivery plus O&M/subscription.
