Electromechanical switches use mechanical actions to change the direction or orientation of path continuity within its terminal base. There are many uses for switches for electronics items: power supply main switches, various switches used to control aspects of performance, often on more professional items of electronic equipment, switches for electronic equipment used for many professional equipment, and very many other uses. They are commonly found on many household items, and automotive applications because of their durable construction and simple operation. In the context of commercial vehicles, electromechanical switches play a crucial role in controlling various electrical systems within the vehicle. These switches are physical devices that use mechanical action to open or close electrical circuits, allowing or interrupting the flow of electrical current.

Global key players of Commercial Vehicle Electromechanical Switch include Alps Alpine, Uno Minda and Littelfuse, etc. The top three players hold a share over 34%. APAC is the largest market, has a share about 40%. In terms of product type, Push is the largest segment, occupied for a share of about 24%, and in terms of application, Trucks has a share about 40 percent.
