Abstracts

Commercial vehicle prognostic systems are used to calculate the failure time for various systems and their components. Here, failure signifies the point at which a system can no longer be used to deliver the desired task or performance. Moreover, commercial vehicle prognostic has been a new area of development in telematics over the years. Commercial vehicle prognostic systems are capable of communicating the cause problem of any vehicle system and propagate upstream and downstream effects across a vehicle system. Automotive manufacturers, such as Volvo, provide an open platform that can be used to develop telematics solutions for different stakeholders. They have also offered some of the application interfaces from their solution, which can be utilized by other vendors to develop telematics solutions. Tracking a vehicle using GPS has now become a traditional application of telematics. However, with technological advancements in data analytics and cloud technology, it is possible to detect every component of the vehicle. Commercial vehicle prognostic systems have wide applications. They are used to observe driving behavior, fleet management and prognostics. The use of better technology and improved transmission design will help in attaining better mileage and fuel efficiency.

SCOPE OF THE REPORT:

This report studies the Commercial Vehicle Prognostic System market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Commercial Vehicle Prognostic System market by product type and applications/end industries.

The advancement of next-generation telematics protocol is one of the key trends that

will contribute to commercial vehicle prognostic system market growth over the years. Some of the telematics service vendors, such as Connexions, WirelessCar (Volvo) and BMW, have already developed a standardized platform called Next-Generation Telematics Protocol (NGTP). This flagged the way for the designing of more scalable and flexible telematics systems. The implementation of next-generation telematics protocols by telematics service providers will help in offering cost-effective telematics solutions to customers for making useful additions to the present telematics practices in the commercial vehicle prognostic system market. This ongoing trend related to prognostic systems will raise the demand for commercial vehicle prognostic systems in near future.
