## Abstracts

According to our (Global Info Research) latest study, the global Commercial Waterless Cleaning Robot market size was valued at US\$ 11.4 million in 2024 and is forecast to a readjusted size of USD 20.7 million by 2031 with a CAGR of 7.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Commercial cleaning robots are intelligent cleaning equipment designed for commercial scenarios. Through core technologies such as laser radar and AI visual recognition, they can achieve autonomous navigation, dynamic obstacle avoidance and 24-hour unmanned operation. Its integrated module design of washing, sweeping, pushing and sucking can efficiently clean hard floors such as tiles and marble, cover traditional blind spots such as corners and under tables, and cooperate with ultraviolet disinfection or dust pushing functions to meet the deep cleaning needs of multiple scenarios such as shopping malls, office buildings, and hospitals. Some models support multi-machine cluster collaboration, greatly improve cleaning efficiency through cloud scheduling, and are equipped with emergency stop protection, automatic charging and fault self-checking systems to ensure safe and stable operation. This type of robot can not only significantly reduce labor costs and alleviate the problem of labor shortage, but also has a technological interactive experience, becoming an important part of modern smart city services. For other types of cleaning robots on the current market, the additional cost of adding water, changing water and charging base stations is at least more than 10,000 yuan, and drainage grooves need to be excavated and ground waterproofing needs to be damaged. For commercial waterless cleaning robots, there is no requirement for the

location of the charging pile when the charging pile is configured for the first time, as long as there is a power socket. There is no need to damage the customer's site for construction and renovation of water supply, drainage and circuits. This will fundamentally eliminate the safety hazards caused by the coexistence of water and electricity, and avoid serious blockages and ground flooding due to inadequate maintenance during later use.
